SOIL REGEN®

STRUCTURAL SOIL CONDITIONER
1-1-1+MYCORRHIZAE

**KNOWN WORLDWIDE FOR SIMPLY THE BEST...
...NATURAL FERTILIZER & SOIL BUILDERS!**

SUSTÅNE SOIL REGEN®

Soil ReGen is a soil conditioner that reduces soil compaction, increases water and air infiltration and improves the nutrient and water holding capacity. Soil ReGen supplies organic-rich and biologically stable humates and organic matter, beneficial microorganisms and organic nutrients - all in dry, uniform particle size.

Recommended Uses

Soil ReGen is used for amending soils on golf courses, landscape beds, athletic fields, commercial turf and home lawns. Apply Soil ReGen to improve water infiltration and to relieve compaction in stressed turf areas. Use Soil ReGen for land reclamation, bio-remediation, and rebuilding of disturbed or depleted soils. Incorporate into soil to improve structure, increase permeability, and improve establishment of turf seeding and sod installations.

Professional Grade

Sustane Natural Fertilizers are backed by over 30 years of independent applied research on diverse crops and ecosystems. This research is unmatched by any other organic fertilizer manufacturer and is this foundation that has developed products that perform consistently under a wide variety of soil and crop production systems; and is why Sustane is recognized by growers from around the world. There simply is no substitute for testing and applied research or a better way to optimize plant growth sustainably.

CONTAINS

SUSTÅNE AEROBIC COMPOST,
AZOMITE®, BIO-CHAR,
HUMATES, LANGBEINITE,
MYCORRHIZAE, PUMICE,
SEAWEED, AND ZEOLITE.

SOIL REGEN BENEFITS

- Improves soil structure and aggregation.
- Helps reduce soil compaction.
- Aerates soil and improves oxygen availability in soil.
- Increases infiltration and permeability.
- Increases water holding capacity.
- Increases nutrient holding capacity.
- Contains all essential elements required for photosynthesis.
- High Cation Exchange allows plants to more effectively utilize nutrients, while reducing loss by leaching.
- Aids the colonization of beneficial soil microorganisms which supplies humic acid and encourages vigorous root growth.
- Provides carbohydrates such as alginic acid and mannitol.
- Contains mycorrhizae for improved nutrient and water uptake, and increased plant stress tolerance.
- Provides stabilized organic matter (Humus).
- Provides organic plant nutrition.

Medium Grade: SGN 200
Mesh Size -7+14
(2.8 mm to 1.4 mm)

SUSTÂNE SOIL REGEN®

INGREDIENTS, APPLICATION RATES & SUGGESTED USE

SOIL REGEN KEY INGREDIENTS

AEROBIC COMPOST FROM SUSTÂNE:

Biologically stable, microbially diverse, rich in plant nutrients, humic substances and high quality organic matter. Aerobic compost is the foundation for improving soils. USDA Biobased.

AZOMITE® is a rich natural ore that supplies diverse micronutrients in a highly mineralized complex silica ore (i.e. Hydrated Sodium Calcium Aluminosilicate).

BIOCHAR is made from biomass via pyrolysis is a stable, carbon-rich soil amendment that acts as a scaffold that retain nutrients, bind organic by products, and supports microbial growth for improved nutrient cycling.

HUMATES are a naturally-occurring, carbon residues that can enhance root uptake of nutrients and further stimulate soil life.

KELP provides biostimulatory components that can improve rooting and enhance plant stress tolerance. Kelp provides a complex, active mixture of polysaccharides, organic acids, vitamins, phytohormones, as well as essential macro and micro nutrients that improve the survival potential of plants.

LANGBEINITE is a naturally occurring mined crystalline mineral. It is a rich natural source of low salt, water-soluble potassium, magnesium and sulfur.

MYCORRHIZAL INOCULANT:

Mycorrhizae are mutualistic fungi that enhance plant growth and health by improving nutrient and water uptake and protecting against root pathogens. They also improve soil structure for better soil health and plant establishment. Sustâne supplies a specifically selected suite of four endo mycorrhizae species.

PUMICE is highly porous and holds both water and air— critical to well-conditioned, aerated soils. With a naturally lightweight structure, it provides an excellent platform for supporting the root systems of diverse plants on green roofs and other urban settings.

ZEOLITE has a large surface area and the molecular structure and porosity provide the ability to retain moisture and nutrients in a manner complementary to pumice.

Available particle size:

MED GRADE, 200 SGN (2.8 MM - 1.4 MM)

Item #	Package Size	Units / Pallet
Sustâne Soil ReGen 1-1-1		
MEDIUM GRADE, 200 SGN		
50-20-1111	50 lb. bags	40 bags / pallet
50-20-1151	1-ton tote	1 tote / pallet

RATES AND APPLICATION

COVERAGE:

50 lb. covers 1,000 ft² @ 0.5 lb. N per 1000 ft² (22 lb. N per acre)
22.67 kg covers 93 m² @ 0.25 kg N per 100 m² (25 kg N per hectare)

TURF ESTABLISHMENT (PRE-PLANT):

Broadcast and Incorporate into top 4 in. (10 cm) of soil.
50 lb. per 1,000 ft² or 2,200 lb. per acre
25 kg per 100 m² or 2,500 kg per ha

SOIL RECONSTRUCTION:

Blend in 60 to 80 lb. per yd³ (30-40 kg per m³) of soil mix to provide 0.6 to 0.8 lb of N per yd³ (0.3 to 0.4 kg of N per m³)

RENOVATING LANDSCAPES & GARDEN BEDS

Use 16 to 24 lb. per 100 square feet of bed (7 to 11 kg per 10 m²)

Store in a cool dry place.
