

**TOP 10
REASONS WHY
SUSTANE IS KNOWN AS WORLDWIDE
AS BEING SIMPLY THE BEST...
NATURAL FERTILIZERS AND SOIL BUILDERS**

- 1 Provides TOTAL Plant Nutrition**
Suståne contains all 17 nutrients known to be essential for plant photosynthesis to occur.
- 2 Feeds Plants Over Time...Without Burn or Loss to the Environment**
Plants are like people in that they need nutrition in small doses over time. Suståne provides both early nutrient availability for quick starts, as well as slow-release nutrition for long lasting growth.
- 3 A Fertilizer AND Soil Builder – Suståne Strengthens and Restores all Soil Types**
Suståne fertilizers contain stabilized organic matter (humus) that improves the soil's capacity to store and exchange nutrients. Humus improves the water holding capacity of soils and improves water filtration by increasing soil pore space.
- 4 Improves Soil and Plant Biological Activity**
Soil and plants are dependent on the level of biological activity present in their ecosystem. With the application of Suståne, beneficial soil microorganisms thrive and multiply. The key to the general health of plants and soils is to maintain diversity in their systems, and Suståne does this naturally.
- 5 Fights Soil and Plant Diseases the Natural Way**
No other fertilizer has been proven to be as effective as Suståne in helping fight plant disease caused by soil borne pathogens. Suståne has been tested for its capacity to reduce plant injury and help plants recover from disease-causing organisms by enhancing beneficial soil biological activity without pesticide use.
- 6 Safe, Sustainable, and Easy to Use**
Suståne products are biologically stable so there is no offensive odor and no harmful bacteria. Uniform granulation eliminates dust and provides consistent, precise coverage. Our products are ecologically sound and simple to use.
- 7 Made from Natural and Organic Materials**
The Suståne process begins with nutrient rich organic matter and concentrates it into the finest compost. The result of our six-month aerobic composting method is a material that is rich in humus, dense with all-natural and organic nutrients, and biologically active.
- 8 Built with Renewable and Recycled Resources**
Because Suståne is made from concentrated organic matter, it is truly a resource conserving fertilizer, one that is not dependent on fossil fuels and synthetic processes. Our OMRI listed products are approved for organic growers and are USDA certified as biobased materials.
- 9 Used by Professional Growers Around the World**
Suståne is used by professional growers in over 60 different countries. Suståne serves all green industries including Agriculture, Landscape, Home Gardens, Erosion Control Revegetation, Nursery and Greenhouse Production, and Turfgrass.
- 10 Research Driven Results for Unmatched Performance**
At Suståne, we believe in the science of sustainability, which is why we've compiled over 700 independent studies to create the best possible products. Through research conducted by scientists at many universities and independent research facilities around the world, Suståne consistently demonstrates superior results time and time again.
