

SUSTÅNE HELPS OVERCOME SUMMER PATCH & ASCOCHYTA LEAF BLIGHT

On July 14th I had several large areas of brown/dead turf. The cause of this was a combo of Summer Patch and Ascochyta Leaf Blight which occurred in mid-June. On July 14th I decided to turn it around. After raking the dead turf, I then applied Soil ReGen 1-1-1 on 4 areas, in total 500 -700 ft². The next photo was taken 6 days later and then fertilized with a 28-0-3 50% PCSCU and 20% organic.

Also, looking out the upstairs window you clearly see where Suståne Soil ReGen was applied as those areas are darker green than the the other lawn. Clearly the Soil ReGen treated areas received more nutrients than the areas that only received fertilizer.

Suståne Soil ReGen[®]
Soil ReGen[®] is a soil conditioner that reduces soil compaction, increases water and air infiltration and improves the nutrient and water holding capacity. Soil ReGen supplies organic-rich and biologically stable humates and organic matter, beneficial microorganisms, organic nutrients and structural minerals - all in dry, uniform particle size.

For more information, contact your distributor, or Suståne Natural Fertilizer.
